

Construction of upgrades and improvements for the:

Township of Hillside North Avenue Pump Station Improvements Project
(\$1,837,000.00)

were financed by the New Jersey Water Bank (NJWB). The NJWB is a State Revolving Fund program jointly administered by the New Jersey Department of Environmental Protection (DEP) and the New Jersey Infrastructure Bank (NJIB) and uses a combination of funds provided by the United States Environmental Protection Agency, the DEP, and the NJIB to provide very low interest loans to borrowers for environmental infrastructure projects.

This project will provide water quality benefits to the Township of Hillside by upgrading the infrastructure of the pumping station consisting of new pumps with associated piping, mechanical equipment, replacement of the existing roof and vents, and resurfacing of the dirt path that leads to the pump house. These upgrades to the infrastructure will expand the life and efficiency of the pumping station that pumps the sewage for the residents and businesses of the Township of Hillside.

State Revolving Fund programs around the nation provide states and communities the resources necessary to maintain and improve the infrastructure protecting our valuable water resources nationwide.
